Developed in 1977 by Richard Woodcock and Mary E. Bonner Johnson, Woodcock-Johnson Cognitive Ability Tests is one of the most popular intelligence tests available today. Most recently updated in 2014 (called WJ IV), the Woodcock-Johnson test is an intelligence test that can be used for participants between the ages of 2 and 90. The test is similar in nature, and can often be used instead, wechsler Intelligence Scale for Children (WISC) for educational diagnosis of children. The test is primarily used to measure academic achievement, oral language, sholastic abilities and overall cognitive skills. What are Woodcock-Johnson Cognitive Ability Tests? The Woodcock-Johnson test is a multiple-choice intelligence test that can be administered by schools, psychologists and testing centers. The test includes what is so known as a standard battery and an extended test battery. Previously, the Woodcock-Johnson III test (also known as the WJ-III test) was used to develop intelligence indexes for General Intellectual Ability (GIA) and Brief Intellectual Ability (BIA). With the introduction of the WJ IV test, there are currently three test batteries that can be used independently or in combination. These batteries: WJ IV Cognitive Ability Tests. This test is used to identify learning problems and individual strengths and weaknesses. This is similar to other intelligence tests such as Stanford-Binet tests and Wechsler intelligence. WJ IV Achievement Tests. This test battery is used to measure the level of mathematics and reading and to compare academic achievement in relation to academic knowledge of the subject. WJ IV Oral Language Tests. This test battery is used to assess language proficiency. WJ IV Cognitive Ability TestsCognitive ability part of the Woodcock-Johnson test consists of the following tests. Standard BatteryOral VocabularyNumber SeriesVerbal AttentionLetter-Pattern MatchingPhonological ProcessingStory Recall TestVisualizationGeneral InformationConcept Formation:Advanced BatteryNumbers ReverseNumber-Pattern MatchingNonwordVisual-Auditory LearningPicture RecognitionAnalysis-SynthesisObject-Number SequencingPair Short-Term Working Memory-AdvancedBrif Intelligent AbilityG-Gc CompositeCognitive Processing Speed (Gs)Number Fund (N)Perceptive Speed (P)General Intelligent Ability Auditory Processing (G)Auditory Memory Span (MS)Understanding-Knowledge-ExtendedLong-Term (Glr)Reasoning Fluid Fluid (Gf)Visual Processing (Gv)Fluid Reasoning-ExtendedCognitive EfficiencyShort-Term Working Memory (Gwm)Cognitive Efficiency-Extended ClustersThe WJ IV Tests of AchievementThe Woodcock Johnson Tests of Achievement Part of the test consists of the following tests :Standard Identification BatteryLetter-WordApplied ComprehensionCalculationWriting SamplesWord AttackOral ReadingSentence Reading FluencyMath Facts FluencyWriting FluencyExtended BatteryReading RecallNumber MatricesEditingWord Reading FluencySpelling of SoundsReadyScienceSocial StudiesHumanitiesF of these tests are clogged with the following intelligence clusters. Listening to Understanding (Spanish)Broad Oral Language (Spanish)Speed of Lexical AccessPhonetic codingVocabularyOral LanguageBroad Oral LanguageOral ExpressionListening ComprehensionWoodcock-Johnson IV ScoringLike many other intelligence tests, Woodcock Johnson scoring has some difficulty. There are several different scores received after the Woodcock-Johnson test. The three types of WJ IV scoring ranges that are provided after the exam are the level of development, the comparison with peers and the degree of knowledge scores. Development level estimates are designed to explain estimates in terms of age equivalents and class equivalents. Thus, these scores explain a child's score against people of their same age or class to determine if their index scores are at, above or below their current age and grade.Comparison with peers evaluating test takers against a standard score, like other intelligence tests (where the average score is 100 and the standard deviation is 15). It also offers a percentage rank that quantifies where the score falls into the overall testing population and the classification range that assigns the label a range of scores. The table below shows how all three are connected between the three. GradePercentile RankRange Classification131 and above98 to 99.9Very Superior121 to 13092 to 97Superior111 to 12076 to 91High Average90 up to 11025 to 75Average80 to 899 to 24Low Average70 to 793 to 8Low69 and below 0.1 to 2Very LowDegree Knowledge Scores are metrics that show how a child performs at a functional level compared to tasks which typical children in their age group or class will perform at a 90% efficiency level. Results can range from 100/90 to 0/90. The table below shows a detailed overview of RPI assessments, perceived functionality and the impact of the assessment on a child's academic achievements. Rpi Difficulty in the academic field100/90Very AdvancedExtremely Easy98/90 to 100/90AdvancedVery Easy95/90Within normal limits AdvancedEasy82/90 to 95/90Within Normal LimitsMans67/90 to 82/90Minlblio infringed Within the normal range of ult24/90 to 67/90Mildly ImpairedVery Difficult3/90 to 24/90Svereto violated The Acute Difficult0/90 to 3/90Severely Violation OfImpossibleWJ III vs. WJ IVIn 2014 Fourth Edition Test replaced Woodcock-Johnson III Cognitive Ability Tests. There were quite a few changes as the test moved from version three to four, with some of the most notable changes listed below: Woodcock-Johnson III Tests Achievements had fourteen more extended battery clusters between parallel forms, Standard Battery Academic Tests, Advanced Battery Academic Tests, Standard BAttery Academic Clusters, and Advanced Battery Academic Clusters.Tests Achievement History Recall, Understanding Directions, Picture Vocabulary and Oral Understanding Tests in WJ III have been replaced by WJ IV Cognitive Battery, WJ IV Oral Language Battery, WJ IV Oral Language Battery, WJ IV Oral Language Battery, WJ IV , Word Reading Fluency Test, Science Test, Social Studies Test, Humanitarian Test, and a new reading cluster. The Woodcock-Johnson III Cognitive Ability Tests included five new tests in the standard battery, including verbal attention, Letter Pattern Compliance, Phonological Processing, History Recall, and VisualizationIn this key change in the cognitive ability test was the inclusion of tests for diagnosis that had previously been included only as a supplement to WJ. Differences in cognitive abilities test scores were also significant, as WJ III tested many new intelligence clusters. For example, phonemistic awareness, working memory, and recall delays have been replaced by understanding, fluid thinking, and short-term working memory. GROUPINGS AND EXPLANATIONS OF THE WJIII SUB TESTS (There are 22 academic tests. 2. Reading fluency - the speed of reading sentences and answering yes or no to everyone. 9. Understanding the passage - verbally providing the missing words removed from each sentence or a very brief paragraph. (like Woof, said, biting the hand that fed him.). 13. Word Attack - Reading meaningless words (such as plurp, fronkett) aloud to test phonetic word attack skills. 17. Reading Vocabulary - orally stating synonyms and antonyms for printed words and verbally completing written analogies (e.g. Elephant: Big: Mouse: . . . . . 21. Sound Awareness - Rhyming, Deleting, Replacing and Reversing Sounds. Reading clusters (are a combination of subtests, they average Broad reading (Is a combination of these 3 subtests): Basic reading skills (is a combination of these 2 subtests): Reading understanding (is a combination of these 2 subtests) 1. Identification of the letter-word 1. Identification of the letter-word 9. Passage Understanding 2. Reading fluency 13. The word Attack 17. Reading Lexicon 9. Passage Understanding These 5 reading areas are included in the assessment recommended by NCLB (NO CHILD LEFT BEHIND) : Phonemic Awareness Acoustics Fugitive Vocabulary Understanding Strategies (1.) Sound Awareness Test (for Phonemic Awareness Subtest) and Sound Mixing (2.) Word Attack, the ability to read silly words (Acoustics) (3.) Reading fluency (4.) Reading Vocabulary (5.) Passage Understanding (low level of understanding at sentence level, using fill the gap.) Other useful subtests are spelling sounds subtest, and Picture Vocabularytest subtest. Other academic areas to evaluate: writing, spelling and math, including fluency writing and math fluency. Written language 7. Spelling - writing letters and words from dictation. 8. Writing fluency - writing simple sentences, using three words for each item and describing the picture as quickly as possible within seven minutes. 11. Writing samples - writing sentences in accordance with instructions; Many items include images. spelling does not count on most elements. 16. Editing - oral correcting intentional errors in the types of sentences. 18. Writing sounds - writing dictated meaningless words. Punctuation and capitalization are a formal written test of these skills. Written Language Clusters Broad Written Language (is a combination of these 3 subtests): Basic Writing Skills: Written Expression: 7. Spelling 7. Spelling 8. Writing fluency 8. Writing fluency 16. Editing 11. Writing samples 11. Writing Samples Mathematics 5. Calculation - includes arithmetic calculations using paper and pencil. 6. Math Fluency - speed of simple calculations within 3 minutes. 10. Applied problems are the oral, mathematical problems of the word solved by paper and pencil. 18. Quantitative Concepts - Oral Questions About Mathematical Factual Information, Operating Signs, etc. Mathematics Clusters Broad Mathematics (Is a combination of these 3 subtests): Mathematics Calculation Skills: Mathematics Reasoning: 5. Calculation 5. Calculation 10. Applied Problems 6. Mathematics Fugitive 6. Mathematics Fugitive 18. The quantitative concept is 10. Applied Problems Listening Understanding 3. History Recall - the student answers oral questions about the stories that were dictated to the student. 4. Understanding the direction - The student follows oral instructions to point out the different parts of the photo. 12 Story Recall - Delay - Student answers questions about stories heard earlier. 14. Vocabulary painting - student points to named photos or names 15. Oral Understanding - The student provides antagonistic or synonyms of spoken words and completes oral analogies (e.g. elephant to large as a mouse to q) 19. Academic knowledge - oral questions about (art, literature and music). 21. Sound Awareness - (Phonemic Awareness) Rhymes, Removal, Replacement and Reversal of Conversational Sounds. Oral Language Clusters Oral Language Standard Skills Oral Language Advanced Listening Skills Oral Expression 3. History Recall 4. Understanding Direction 4. Understanding Direction 3. History Recall 4. Understanding Direction 14. Illustration by Vocabulary 15. Oral understanding 14. Illustration by Vocabulary 15. Oral Understanding Academic Skills: Academic Fluency: Academic Applications: Phoneme/Grapheme Knowledge: 1. Letter-Word Identification 2. Reading fluency 9. Passage Understanding 13. The word Attack 5. Calculation 6. Mathematics Fugitive 10. Applied Problems 20. Spelling Sounds 7. Spelling 8. Writing fluency 11. Writing Samples of Total Achievement: Broad Reading Broad Mathematics Broad Written Language Information about this has been adapted from Fairleigh Dickinson University, a website created by Dumont and Willis Riverside Publishing Company website website woodcock johnson subtests descriptions. woodcock johnson subtests for dyslexia. woodcock johnson iv subtests. woodcock johnson oral language subtests. woodcock johnson iv subtests descriptions. woodcock johnson iv cognitive subtests. woodcock johnson iii subtests. woodcock johnson 4 subtests
